PIETERMARITZBURG

REPORT OF THE MEDICAL OFFICER OF
HEALTH ON THE PUBLIC HEALTH AND
SANITARY CIRCUMSTANCES OF THE CITY
AND BOROUGH OF PIETERMARITZBURG FOR
THE YEAR ENDED JUNE 30TH, 1939.

BY

M.MAISTER, B.A., M.B., Ch.B., D.P.H.

MEDICAL OFFICER OF HEALTH.

and the second s

the second of th

INTRODUCTORY.

CITY AND BOROUGH OF PIETERMARITZBURG

PUBLIC HEALTH DEPARTMENT

To His Worship the Mayor and Members of the Council of the City and Borough of Pietermaritzburg.

Madam and Gentlemen,

I have the honour to present the Annual Report on the Health and Sanitary Circumstances of the City and Borough of Pietermaritzburg for the year ended 30th June, 1939.

The increase in the European Birth Rate, the fall in the General Death Rate and the decline in Tuberculosis mortality and notifications are perhaps the most noteworthy features of the Vital Statistical report. Diphtheria has shown an increased incidence, but the incidence of other infectious diseases remains low. Taken altogether Pietermaritzburg's health year has been a very good one.

During the period under review the construction of the Council Native and Asiatic Subeconomic Housing Schemes (comprising a total of 150 houses) was commenced, and it is anticipated that the bulk of these houses will be ready for occupation by the commencement of 1940. The City Council's Economic Housing Scheme of 50 houses at "Gardens" has also been commenced and these houses too will be ready for occupation in a short while.

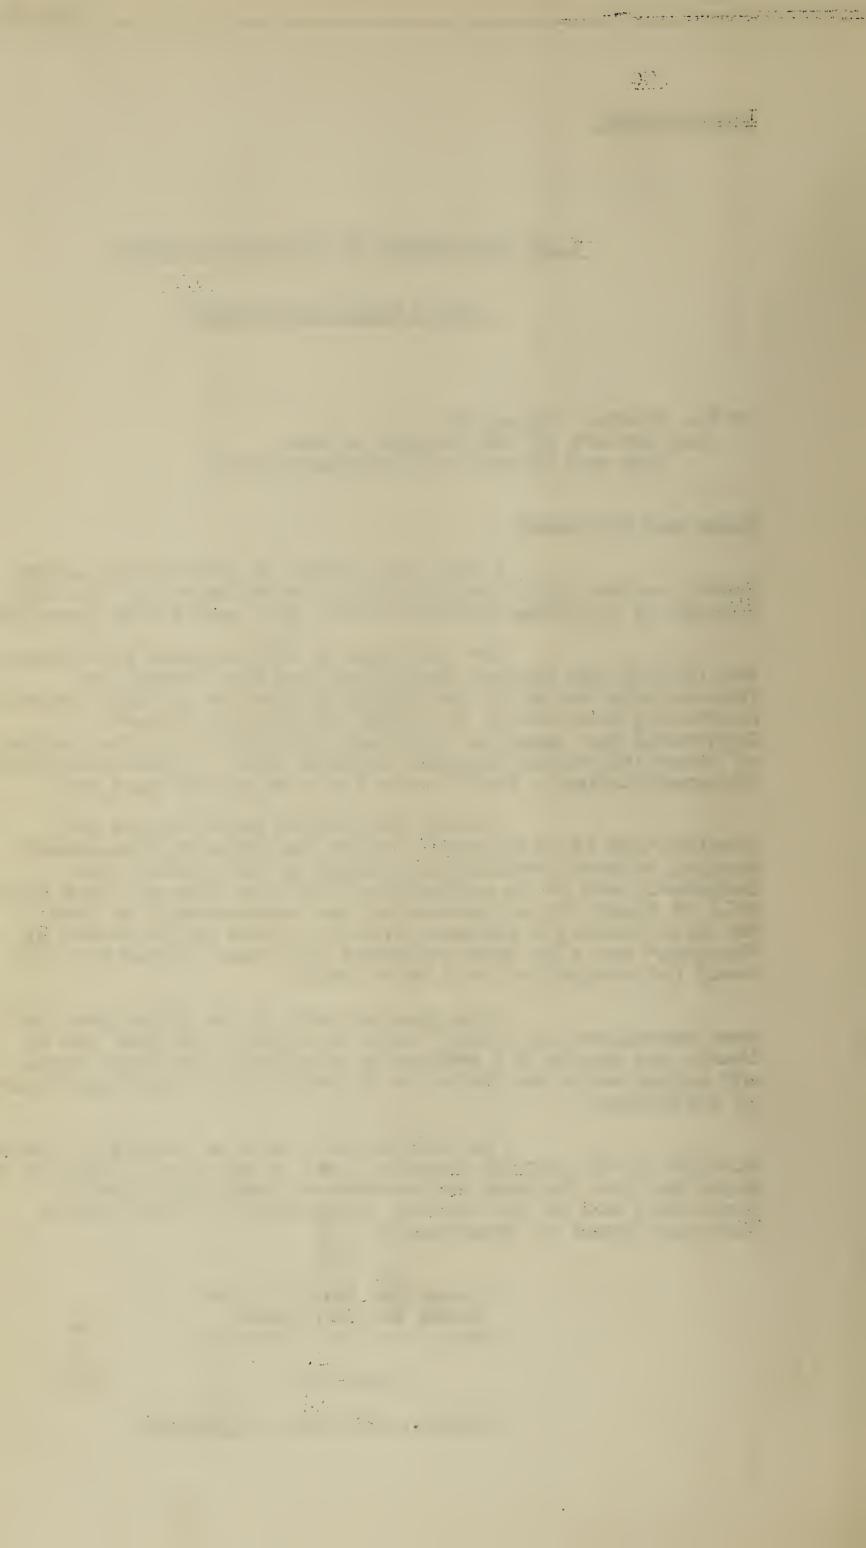

The general work of the department has been maintained at a high level throughout the year and my thanks are due to all members of the staff for their loyal and enthusiastic co-operation in maintaining this high standard of efficiency.

In conclusion I wish to record my appreciation of the support readily given to me at all times by the Mayor and the Chairman and members of the Public Health Committee, and of the cordial co-operation of the various Municipal Heads of Departments.

I have the honour to be, Madam and Gentlemen, Your obedient servant,

M.MAISTER.

MEDICAL OFFICER OF HEALTH.

(1) Vital Statistics cont'd

BIRTHS (Page 5).

The European Birth Rate has shown a very welcome increase from the previous year's figure of 16.37 to 18.73. It is probable that this increase is merely a chance statistical fluctuation; possibly it may be a reflex of the present period of economic prosperity. It is of interest to note that a similar arrest of the falling birth rate has been recorded recently in many places where the falling birth rate has caused anxiety.

The Native Birth Rate has risen from 16.63 to 21.18 and this increase is probably associated with more complete notification together with the increased proportion of females in the present Native population. The Coloured Birth Rate has risen to 39.59 and the Indian rate has decreased to 22.31.

DEATHS (Pages 5 -7)

The European crude death rate has decreased from 9.43 to 8.73. It is, however, interesting to note that 50% of the deaths occurred in people over 65 years of age.

The Native death rate dropped considerably from 15.28 last year to 11.78, the Coloured rate increased slightly from 18.16 to 19.31, while the Indian death rate remained stationery at 13.74. The death rate for all races was 11.14 as compared with 12.26 for last year.

The following figures indicate the percentage of deaths occurring below the age of 45 in the various races:-

European : 24%
Native : 80%
Coloured : 72%
Asiatic : 55%
All Non-European : 69%

These figures show how much better the expectation of life is for Europeans than for the other classes of the community. The following table also indicates how that the diseases generally associated with later life, eg. Cancer, Cerebral Haemorrhage, Cardiac disease - are a much commoner cause of death among Europeans than among Non-Europeans, whilst bowel infections, lung diseases, syphilis and tuberculosis, are much more frequently the cause of death amongst Non-Europeans.

(2) INFECTIOUS DISEASE

There were 190 notifications of infectious disease, the same figure as recorded for the previous year. The incidence of the various diseases is shown in the table on page 44, and the individual diseases are discussed under the appropriate headings.

ISOLATION HOSPITAL (Page 47)

157 Borough and 59 Out-of-Borough. Figures for the previous three years were 1935-1936 : 166; 1936-1937 : 183; 1937-1938 : 215.

Cases of tuberculosis and typhoid fever are provided for at Grey's Hospital - the Provincial Hospital, and the King George V Hospital for Tuberculosis in Durban. In-patient treatment for venereal disease is provided at the Epidemic Hospital for non-Europeans, while Europeans needing in-patient treatment are sent by arrangement to Addington Hospital, Durban.

EPIDEMIC HOSPITAL (Page 48)

Admissions to this Hospital are still steadily increasing, 971 cases being admitted in comparison with 815 for the previous year. The appointment a year ago of a full time Officer in Charge has been amply justified by the smoothness of the running of the hospital and by the economies effected. By the attendance of the Officer in Charge at the Clinic held at Grey's Hospital valuable co-ordination between the out-patient and in-patient treatment has been obtained. In addition a regular weekly lecture session for the patients has been insti-While used to train the Native Health Assistant and Hospital Orderly Staff in developing the preventive outlook on Venereal Disease, this session has succeeded in placing many new facts on Venereal Disease before the patients. The talk is in Zulu and has already produced definite results as shown by the fact that several natives here, on discharge, immediately proceeded home, collected their entire families and brought them all back to the hospital for treatment.

A most interesting feature of this year's report is that the average period of stay in hospital for cases of Gonorrhoea was 19 days as compared with 32 days for the previous year. This reduction can be attributed largely to the use of Sulphanilamide in the treatment of this disease.

Admissions to the Hospital during recent years have been :-

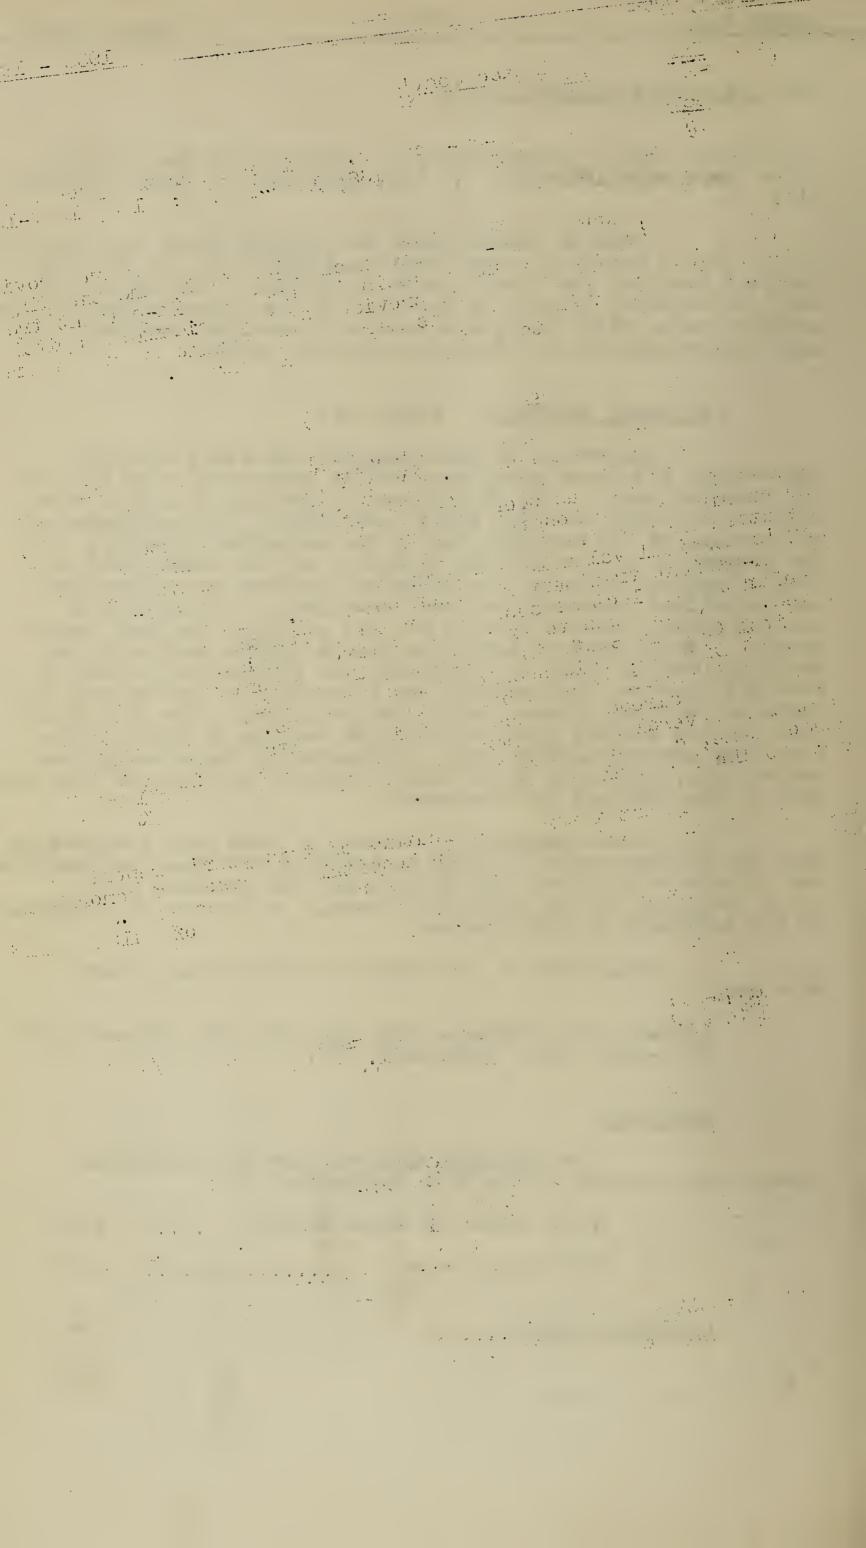

1933-34: 219; 1934-35: 252; 1935-36: 309; 1936-37: 496; 1937-1938: 815; 1938-1939: 971.

AMBULANCE

NOTIFIABLE INFECTIOUS DISEASE

- (a) ANTHRAX. No cases notified.
- (b) SMALL POX. No cases notified. Vaccination of Natives is carried out at the Pass Office (see Page 21)
- (c) <u>DIPHTHERIA</u> The total number of cases notified was 42 as compared with 29 for last year and 21 the year prior to that. One of the cases notified was a Diphtheria Carrier who was admitted to the Isolation Hospital for treatment. There were 2 European deaths and 1 Coloured death from this disease.

The incidence of this disease would appear to be steadily increasing in Pietermaritzburg. Diphtheria is an eminently preventable disease and with the moderh materials available protection against the disease can be secured in over 90% of those immunised, whilst those few not absolutely protected will be at least protected against severe attack. Public apathy however, is such that attempts to waken interest in this subject have failed. It is pertinent to note that immunisation against Diphtheria has recently been made compulsory in France.

- (d) SCAPLET FEVER 12 Cases were notified as compared with 13 last year.

(2) Infectious Disease Cont'd

- (e) <u>CEREBRO-SPINAL MENINGITIS</u>. 3 Cases were notified, two Europeans and 1 Native, as compared with 1 case notified during the previous year.
- (f) <u>LEPROSY</u> 6 Cases were notified 1 Coloured and 5 Natives.
- (g) TYPHUS FEVER Two cases were notified both Europeans.

There was no connection between these cases, and in neither case could like be detected, nor were there any secondary cases. In the Case of the male patient there was no evidence of any tick bite, but the disease pursued a mild course and the Weil Felix Reaction of the blood first became suspicious on the 16th day after the commencement of the illness and positive six days later.

No Murine Typhus Virus could be obtained from the patient's blood, nor could it be demonstrated on examination of a number of rodents trapped in his home. It is possible, therefore, that this was a case of tick bite fever.

In the case of the female patient, the mild illness, the typical rash and the occupation of the patient (she worked in a grain store) immediately raised the possibility of the case being one of murine typhus. Detailed laboratory investigations of the patient's blood and of rats caught at the grain store finally established that the rats harboured the Rickettsiae of murine typhus and that the Rat Flea Xenopsylla Cheopis, under experimental conditions, can transmit the infection to experimental animals. The patient's illness ran a course characteristic of this type of infection.

In a further case (since the completion of the period under report) the virus of murine typhus was isolated from the blood of a human patient, thus demonstrating for the first time the occurence of murine typhus in Natal. These findings have been embodied in a paper which has been sent to the S.A.Medical Journal for publication.

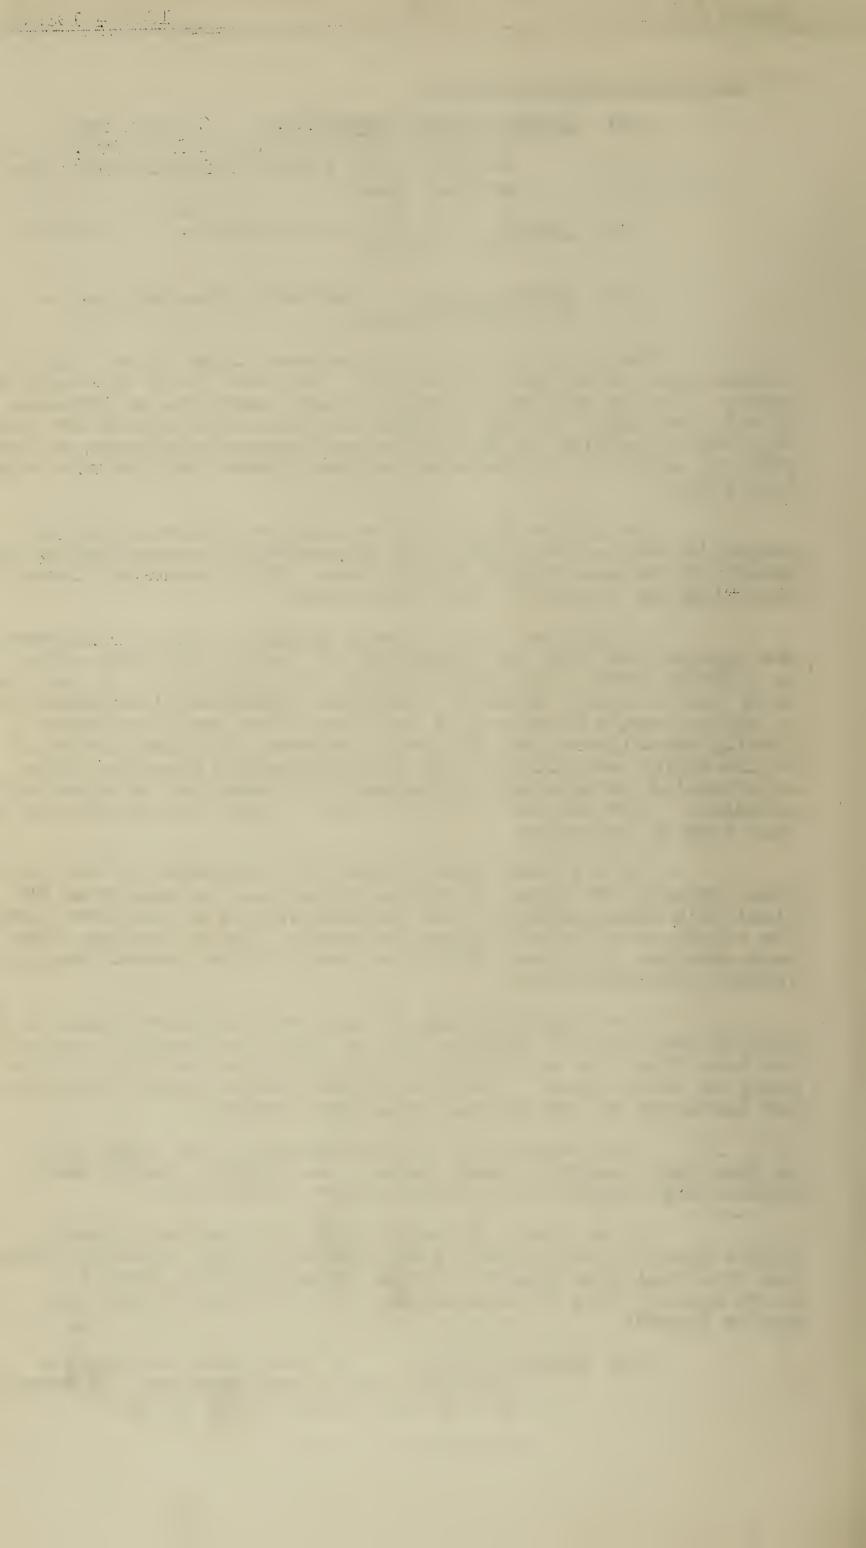

Our thanks are due to the South African Institute for Medical Research for carrying out to such a successful conclusion the laboratory and experimental investigations involved in the study of these cases. This scientific investigation has placed our knowledge of the disease on a firm footing.

The interesting epidemiological fact again noted is that only isolated cases seem to be involved though many persons are exposed to the possibility of infection.

It is clear, therefore, that in Pietermaritzburg rodent proofing precautions that have been taken primarily against the possibility of plague must be intensified in order to guard against this fortunately much less formidable disease, murine typhus.

(h) ENTERIC FEVER 19 cases were notified, 5
Europeans and 14 non-Europeans, an increase
of 7 on last year's total of 12.

Of these/

(2) Infectious Disease Cont'd

(h) Enteric Fever cont'd

Of these cases 2 (1 European and 1 Native) were doubtful and bacteriological confirmation of the diagnosis was not obtained.

In a further 5 cases the water supply was raw river or stream water, the most likely source of the infection. One patient in a barrack infected 3 other children in the same building.

(i) PUERPERAL SEPSIS 5 cases were notified, 1

European and 4 Non-European. One case
followed an abortion, one followed a complicated delivery with a stillborn child,
and a third followed a still-birth.

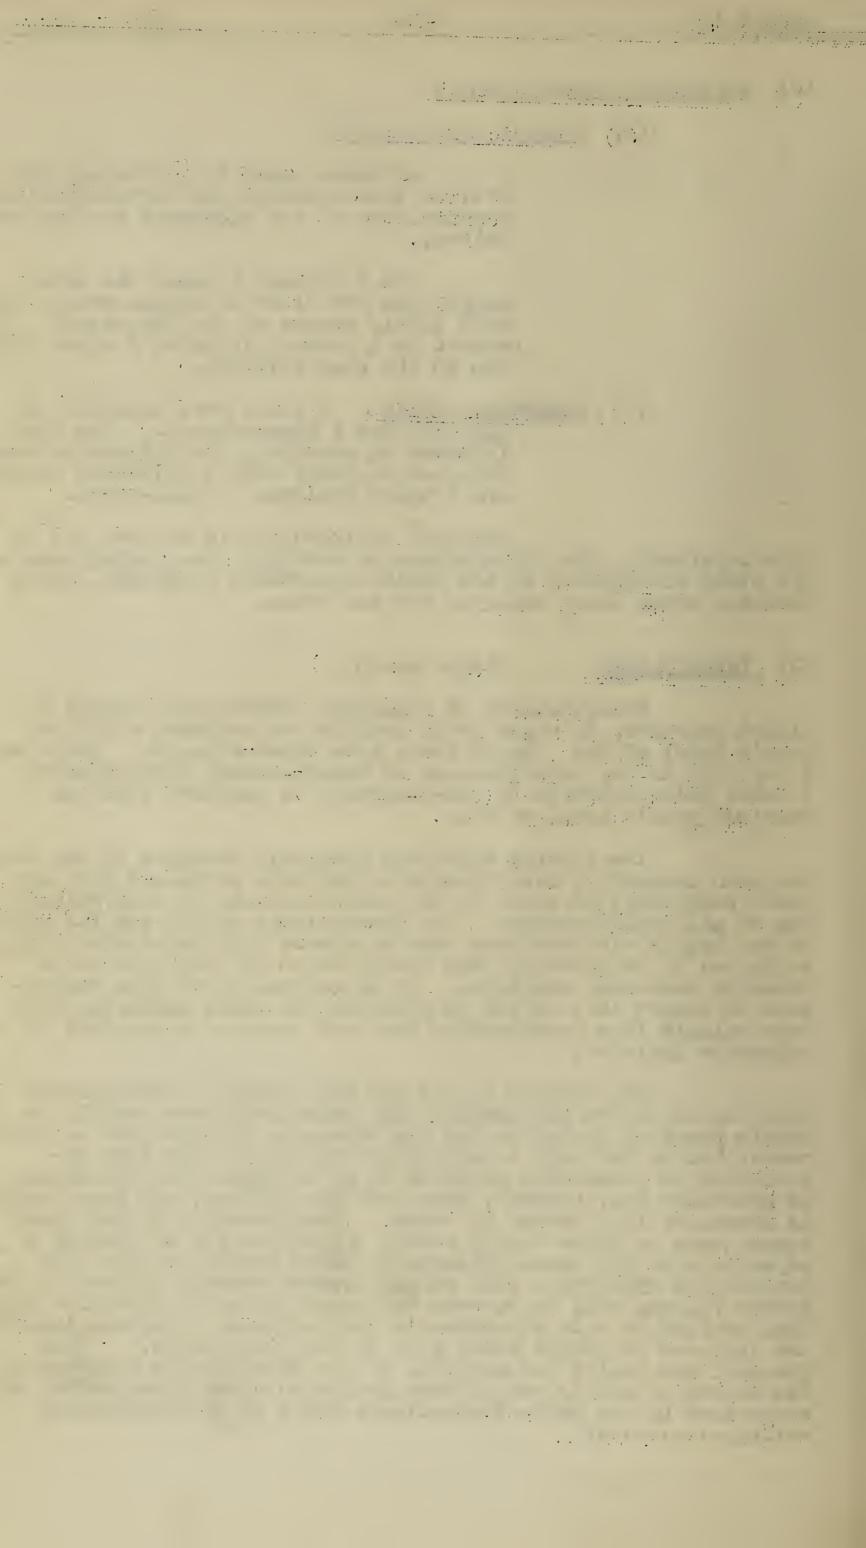

Terminal disinfection is carried out by this Department, the disinfection of bedding, etc., being done at the Steam Disinfector at the Health Department buildings, and a formalin spray being employed for the rooms.

(3) THBERCULOSIS (Pages 38-39)

Notifications of Pulmonary Tuberculosis showed a slight decrease, 80 cases being notified as compared with last year's total of 86. 50 of these were non-Europeans. There was a big drop in the notifications of Non-Pulmonary Tuberculosis, 7 cases being notified (6 non-European) as compared with the previous year's total of 23.

The figures show that among all sections of the non-European community, tuberculosis is far more prevalent than any other notifiable disease, in fact notifications of tuberculosis form 46% of all notifications. The tuberculosis clinic and the work of the health visitors both tend to ensure that cases are notified early and it is probable that notification of tuberculosis is becoming much more complete. It is the policy of this Department to ensure that as far as possible all cases suffering from tuberculosis in a communicable form are treated in hospital or otherwise isolated.

The opening of the new King George V Tuberculosis Hospital in Durban has enabled this Department more readily to obtain hospital isolation for its European, Coloured and Asiatic cases, and so far only a very slight difficulty has been encountered in pursuading patients to go to Durban for treatment. No provision has, however, been made for Natives, and home isolation is necessary in a number of cases. Consideration of the sizes of homes these patients occupy reveal the difficulty of finding a seperate room for these patients in their homes, and the City Council has approved a rent subsidy scheme whereby natives in the Native Village will be removed to larger houses on condition that they conform to this Department's instructions as regards isolation, the increase in rental being paid by this Department. proposal now awaits the sanction of the Union Health Department. The scheme is simply one of Home isolation closely controlled and supervised by the Anti- Tuberculosis Staff of this Department acting..../

(3) Tuberculosis Cont'd

acting through the Native Health Assistants. This scheme will also be of considerable instructional value to the inhabitants of the Native Village

The Tuberculosis Clinic (Page 45)

This Clinic continues to serve a very useful function. The routine examination of all contacts of every case of tuberculosis notified is one of the most important functions of the Clinic, and is aimed at detecting early cases and so preventing the development and spread of the disease. During the year there were 1866 attendances at the clinic while 2128 visits were made to tuberculotics and contacts in their homes. Of the larger measures to combat tuberculosis 100 Native and 50 Asiatic Sub-economic houses are well on the way towards completion. It is hoped that this represents only the beginning of a complete scheme of slum elimination and sub-economic rehousing.

Attention must be drawn to the invaluable assistance thie Department is receiving from the Natal Anti-Tuberculosis Association. Time and again it has been found possible to persuade patients to accept hospital treatment by virtue of grants from this Association which have relieved the patient from anxieties regarding his dependents. All races have benefited. This Association has rendered possible the after care work amongst tuberculotics in Pietermaritzburg which is an essential portion of any scheme to control tuberculosis

(4) <u>VENEREAL DISEASES</u> (Page 46)

The clinics at Grey's Hospital continue to be well attended, there being 9,056 attendances during the year as compared with last year's total of 9,979. New Clinic Quarters are now being constructed by the Grey's Hospital authorities which will be a tremendous improvement on the makeshift quarters in which the clinic has been conducted in the past. The non-European health assistants continue to do good follow-up work and 3650 home visits were paid to non-European cases of venereal disease.

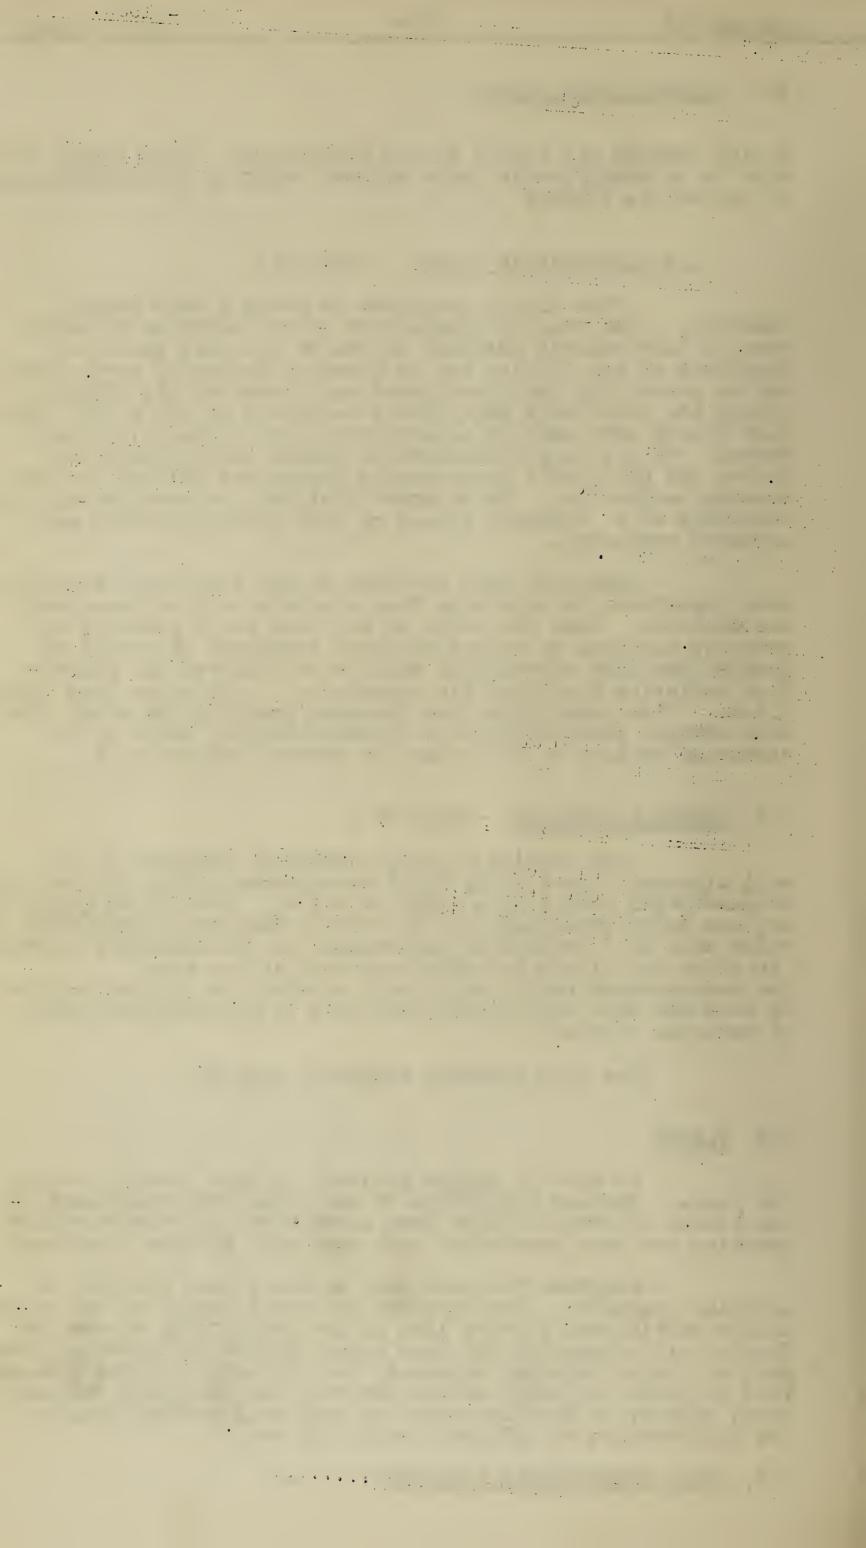

(See also Epidemic Hospital, page 10).

(5) PLAGUE

No case of plague occurred in this locality during the year. Regular inspection of new shops and ware-houses in the course of erection have been carried out and their rodent-proofing has been supervised very carefully by this Department.

Progress has been made in the rodent proofing of existing premises. The greatest potential danger to the population of Pietermaritzburg lies in the possibility of the infection with plague of the town rodent population (through transport of plague infected rodents), for the active inland endemic foci of plague in South Africa are very far away, and the nearest Port, Durban, is 56 miles away and very well guarded against the introduction of infected rodents by sea.

(6) OTHER COMMUNICABLE DISEASES

(6) OTHER COMMUNICABLE DISEASES

(I) MALARIA

Strict control by spotting, oiling and house spraying in order to identify adult mosquitoes has again been carried out during the past year both in the Borough, and, on behalf of the Magistrate as Local Authority for the District of Pietermaritzburg, in the Peri-Urban areas. No mosquito vectors were recovered in the Borough or in the Peri-Urban areas, although numerous anopheline (and Culicine) mosquitoes were breeding freely every where.

Were notified in the Borough, and no cases occured in the Peri-Urban area controlled by this

Department.

5 imported cases occurred where the infection has been definitely acquired in Zululand or the Northern Transvaal.

A certain amount of fencing of swampy areas and tree planting was carried out towards the end of the rainy season and further work will be done during the coming spring.

The control of the adjacent areas for the Government was undertaken by this Department as in previous years. A.Gambiae was discovered in Albert Falls which lies about 5 miles outside of the controlled area, but none were found in the area actually controlled.

An intensive search both for larvae and for adults (by check spraying of dwellings) was carried out throughout the season. The number of houses sprayed during the season was 2,628, 10,041 rooms in all being treated.

(II) ENTERITIS in children under the age of two years accounted for 22 deaths - No Europeans, Native 13, Coloured 3, and Indian 6. The figures for the previous years were :-

1933 - 34 : 52 1934 - 35 : 28 1935 - 36 : 45 1936 - 37 : 45 1937 - 38 : 45

The European figure for the previous year was 5.

This disease is eminently preventable and can be quite readily regarded as an index of the work of an Infant Welfare department. The big fall in mortality this year is, therefore, very pleasing.

(III) MEASLES 33 cases were treated in the Isolation Hospital and of these 3 came from Out of the Borough. No deaths were reported. A large proportion of these cases came from boarding schools and hotels, etc.

and the second s

(6) Other Communicable Diseases cont'd

(1V) WHOOPDNG COUGH 5 deaths were reported (2 Native, 1 Coloured and 2 Asiatic) the disease being moderately prevalent during the year.

(7) WATER SUPPLY

The water supply of Pietermaritzburg is under the control of the City Engineer's Department. It is derived from streams coming from hilly country lying to the west of the Town. From the Storage Dam at Henley the water is piped to the Purification Works, where it is treated with lime and aluminaferric before filtration. After filtration the water is chlorinated before being distributed to the 4 service reservoirs. Construction work is proceeding which will increase the capacity of the impounding dam at Henley by approximately 450 million gallons.

The supply from each of the service reservoirs has been bacteriologically examined each month by the Co. poration Bacteriologist and a high standard of purity has been maintained throughout the year.

(8) NIGHTSOIL AND REFUSE DISPOSAL

The administration of this work is in the hands of the City Engineer. The greater part of the town and suburbs is served by water borne sewage, although the conservancy system is still in use in certain outlying parts. Disposal is on the sewage farm about 3 miles from the centre of the town where broad irrigation is carried out and the screenings are trenched. Most of the new dwellings erected during the year have been sewered. A number have been placed on a septic tank system and a few placed on the pail system.

(9) MEAT SUPPLIES (Pages 52-53)

All slaughtering is carried out at the Municipal Abattoir, which is under the direct control of this department. Butchers' shops are periodically inspected to ensure that they are satisfactory and that no meat which does not bear the Municipal stamp is exposed for sale. 63 inspections of butchers' shops were made.

On the market, in shops and in tea rooms, the following fish and meats were condemned as unfit for human consumption:-

Fish (tinned) 14 tins. Bacon. 1 lb. Ham 5 lbs. Buck. 8 Hares. 13 Herrings. 22 tins. Duiker. 1. Veal. 72 lbs. Ducks 2 Pilchards. 1 tin. Fowls. 24. Fish. 135 lbs.& l box.Pork Pies. 10 Fillet. 2 boxes Guinea Fowl. 3 Sausages. 50 lbs. Giblets (Fowl) 1 lot.

(6) Meat Supplies Cont'd.

There were 24 applications for Butchers' licences, 9 were approved without comment; 15 were approved after certain requirements had been carried out.

The Abattoir Manager reports that during the year 42,788 animals were slaughtered :-

<u>Cattle</u>	<u>Calves</u>	Sheep	Pigs	Goats	Total
8,427	785	31,499	1,862	215	42,788

In addition to the above the following shows the quantity of meat, of animals slaughtered outside the Borough, which was received for examination and stamping:-

Quarters Beef ... 188 Carcases Mutton ... 6 Carcases Pork ... 10

All this meat came from either the Durban Municipal Abattoir, or the Export Abattoir, Maydon Wharf, and these figures show a big decrease on those of the last few years.

Carcases and Viscera Condemned.

The following statement shows the quantity of meat condemned during the year :-

	Carcases	Approx.Weight
Beef Beef. Portions of Carcases,	160	68,580 lbs.
Organs, etc	<i>E A</i>	103,343 "

Pork. Organs, etc Mutton	77	1,580 " 2,222 "
Mutton. Organs, etc	• •	59,669 "
		245,184 lbs.

Cysticerus Bovis ("Measles")

7.21% of grown cattle were found to be infected with "measles". Of these 1.28% were condemned and the remainder, less seriously affected, were detained in cold storage in accordance with the regulations.

5.35% of calves were infected and condemned.

Cysticerus Cellulosæ ("Measles")

2.41% of pigs were infected and were condemned.

The following table shows the number of carcases infected with "measles" during the last 7 years :-

Tuberculosis.

The percentage of cattle found to be infected with tuberculosis was 0.66%, of calves 0.12% and of pigs 4.13%.

Anthrax etc.

No case of Anthrax or other serious notifiable stock disease was encountered during the year. A close watch was maintained for anything of a suspicious nature and where any doubt existed either blood smears or specimens were sent to the Government Laboratory, Allerton. Attention must be drawn here to the short-sightedness of the residents of this town who go to the peri-urban areas for their meat supplies. This meat is entirely uninspected for disease and the hygiene of its slaughter and preparation is entirely uncontrolled. Because of this lack of control there is a small advantage in price, but apparently these persons do not realise that the financial gain is offset by the dangers of disease to which they are exposing themselves, and indeed can only be obtained by their deliberately taking such risks. The possibility of Anthrax is perhaps the most serious risk they run, though tapeworm, while a less serious disease than anthrax, is a more frequent threat.

Slaughtering.

During the year humane killers have been used for the slaughtering of all animals except those slaughtered under religious rites, the Schermer Killer for cattle and the Cash Killer for pigs, sheep and calves.

The two stunning pens and the "Locwil" stunning and casting pen have been in daily use and have continued to give entire satisfaction.

The requirements of the Slaughter of Animals Act (1934) have been fully complied with.

(10) MILK SUPPLIES.

out the year. It is derived from 81 producer-distributors, of whom 57 are in the borough and 24 outside. In addition to these there are 36 producers who send their milk to the two pasteurization plants from where it is distributed after pasteurization. All these dairymen are registered with this department and their premises are inspected. Amendments to the existing Dairy By-Laws now await the final approval of Council. It is hoped to overcome certain difficulties which have led to failure when prosecution was instituted in the Courts.

(10) Milk Supplies Cont'd.

The "Clean Milk" competition was again organised in connection with the Royal Agricultural Society and the general standard attained by the 14 competitors was very satisfactory. The competition for raw milk was won by Mr.F.A.J.Gerber, and the award for pasteurised milk went to the Natal Creamery.

(11) OTHER FOOD SUPPLIES. (Page 50)

Inspection of foodstuffs exposed for sale at the Market and elsewhere has been carried out regularly and a considerable quantity of unsound food of various sorts has been condemned (Page 51).

Details of all licence applications dealt with by the department are reflected in the table on page 54. Careful attention is paid to storage conditions and particularly to rodent proofing and there is a gradual improvement in this connection. 304 Inspections of the Borough Market and 566 inspections of other premises manufacturing or handling food were made. (Page 55).

Food and Drugs Act.

Under the Food, Drugs and Disinfectants Act 81 samples were taken and the results of the analyses were as follows:-

Milk: Total number of samples = 66

In accordance with requirements: 21
Deficient in Solids-not-fat: 44

(1) 8%-8.5% = 39(2) Below 8% = 5

Deficient in Fat ... : 1

Bread: 4 samples, all conforming to standard.

Ice-Cream: 2 samples, both complying with requirements.

Sausages: 6 samples, all conforming to standard.

Mince Meat: 3 Samples. 2 did not comply with standard.

Prosecutions were instituted in regard to milk samples which were certified by the Government Analyst to be adulterated with water; regarding samples showing between 8% and 8.5% Solids-not-fat, a letter is written to the dairyman in each case asking him to take steps to improve his milk in this respect. Prosecution was also instituted in regard to the samples of mince meat which were adulterated. (Pages 57 and 58).

(12) MATERNITY AND CHILD WELFARE . (Page 49)

The <u>European infantile mortality rate</u> has dropped from 53.98 to 41.98.

The <u>Coloured infantile mortality rate</u> has dropped to 109.7, but the figures are so small that no valid conclusion can be drawn therefrom.

The <u>Indian rate</u> has increased to 166.6

The Native infantile mortality rate is unreliable

Selection of the State of the S

t de

(12)Maternity and Child Welfare Cont'd.

owing to the incomplete registration of Native births.

Quite a high proportion of the births in Pietermaritzburg are recorded, for the local hospital is popular amongst Native women and the Municipal Midwife also conducts confinements at the Native Village and in town, all of these births being of course For what it is worth, the figures for Native Infant Mortality have improved considerably for the year under review.

The main causes of infantile mortality in the different races are shown on pages 36 and 37.

Gastro-enteritis, a disease of dirt and improper feeding, was the cause of approximately 30% of the Non-European Infantile Mortality, while no European Infantile deaths were recorded from The disease is controlled by imparting to mothers this cause. the knowledge which will ensure that babies are properly fed and cared for, through the medium of the Infant Clinic sessions and, most important of all, by personal and individual instruction in the home by the Health Visitors.

Lung diseases have been the cause of 6% of the European and 17% of the Non-European Infantile Mortality.

No organised attempt is made by this Department to advise and assist in the care of the pre-school child. Children of this group are brought occasionally to the Infant Clinics for advice, but with the small staff available it is impossible to follow this up by regular Home visiting. The Nursery Health Class Movement is the ideal method of approach for this age group, for it combines care of the physical well-being (which an expanded Infant Welfare Clinic might carry out) with the social training and development of the child (which can never be done at an Infant Welfare Clinic session). A private Nursery Health Class for pre-school children has been established on modern lines at one of the schools in Pietermaritzburg, but there is undoubtedly room for such a school amongst the needy. Local effort to secure such a school is taking shape and it appears that a responsible body will be attempting to initiate such a class. This effort is one that this Department most heartily welcomes for undoubtedly the work done will play a significant part in securing the health of the future citizens of Pietermaritzburg.

The various Child Welfare Clinics continue to be well attended, as shown by the following figures :-

	European	Coloured	<u>Native</u>	Indian
1937-38	4,568	1780	1596	4599
1938-39	4,589	1495	1987	4211

Maternal Mortality.

(12) Maternity and Child Welfare Cont'd.

Maternal Mortality. (Cont'd)

The midwifery training school at Grey's hospital provides midwifery services both in the wards and in the district, and in addition provides Ante-Natal Clinic services for all races.

The following figures have been supplied by the courtesy of the Medical Superintendent of Grey's Hospital:-

Borough Cases: (From 1st July, 1938, to 30th June, 1939);

Ante-Natal Clinic Attendances: District Midwifery Visits

Europeans : 288 Europeans : 1,011
Natives : 646
Coloureds : 166 Coloureds : 357
Asiatics : 327 Asiatics : 3041

District Native confinements are done by the Municipal Native Midwife, who conducted 18 confinements and paid 171 confinement visits during the year.

(13) BY-LAW NOTICES AND PROSECUTIONS. (Pages 55 - 59)

2606 notices and formal letters were served regarding breaches of the Borough By-Laws. 36 prosecutions were initiated in the Magistrate's Court, as detailed on pages 57-59.

(14) OTHER MATTERS OF HEALTH AND SANITATION.

Nursing Homes. All the nursing homes in the Borough have been inspected during the year.

Complaints from Burgesses. 367 complaints were received and attended to during the year.

Medical Examination of Natives:

Number Examined.	Rejected (All Causes)		Referred T.B.Clinio	Vacci- nated.
Male : 13,859	172 1.25%	116 0.84%	33 0.24%	
Female: 99	21: 21.2%	21 21.2%		
Total : 13,958	193: 1.38%	137 0.98%	33 0.24%	1346

Vaccination of all unvaccinated or insufficiently vaccinated Natives coming forward for registration is carried out by the Assistant Medical Officer of Health at the Togt Office.

Once more it is necessary to draw attention to the extremely small number of Native female domestic servants coming forward for examination. Even this small total illustrates the necessity for this examination, for no less than 21 of the 99 examined were rejected because of Venereal Disease

State Aided Butter Scheme.

During the year the City Council decided to take over the administration of the State Aided Butter Scheme for necessitous European and Coloured families (excluding Railway workers). A Voluntary Committee was formed under the Chairman-ship of the Chairman of the Public Health Committee to conduct the necessary investigations into the financial status of applicants. The Child Welfare Society and the Bemevolent Society, who are constantly in touch with needy persons, are both represented on this Committee.

During the year 12,549 lbs. of butter were distributed, 3,977 lbs. to Europeans, 8,572 lbs. to Coloureds.

The average number of families receiving butter each month was :-

European : 73 families (comprising 277 persons).

Coloured: 140 " (" 665 ").

Undoubtedly this scheme has done some good by introducing a valuable protective foodstuff into the diet of a number of necessitous persons. During the year the income level of eligibility was raised by the Dairy Industry Control Board for Coloureds, with the result that some 25% of Coloured families benefiting from this scheme were no longer able to obtain this cheap butter. An extension of this scheme, therefore, to embrace more Coloured families and also Natives and Asiatics would be welcomed. A similar scheme to embrace other "surplus" South African produce would also be welcomed.

Health Propaganda.

The Medical Officer of Health has given the following addresses to various public bodies, both European and Non-European, on matters pertaining to health:-

"Immunisation against Diphtheria" - A Motion moved in the Pietermaritzburg City Parliament.

"Nutrition" - Address to the Home and School Group of the New Education Fellowship.

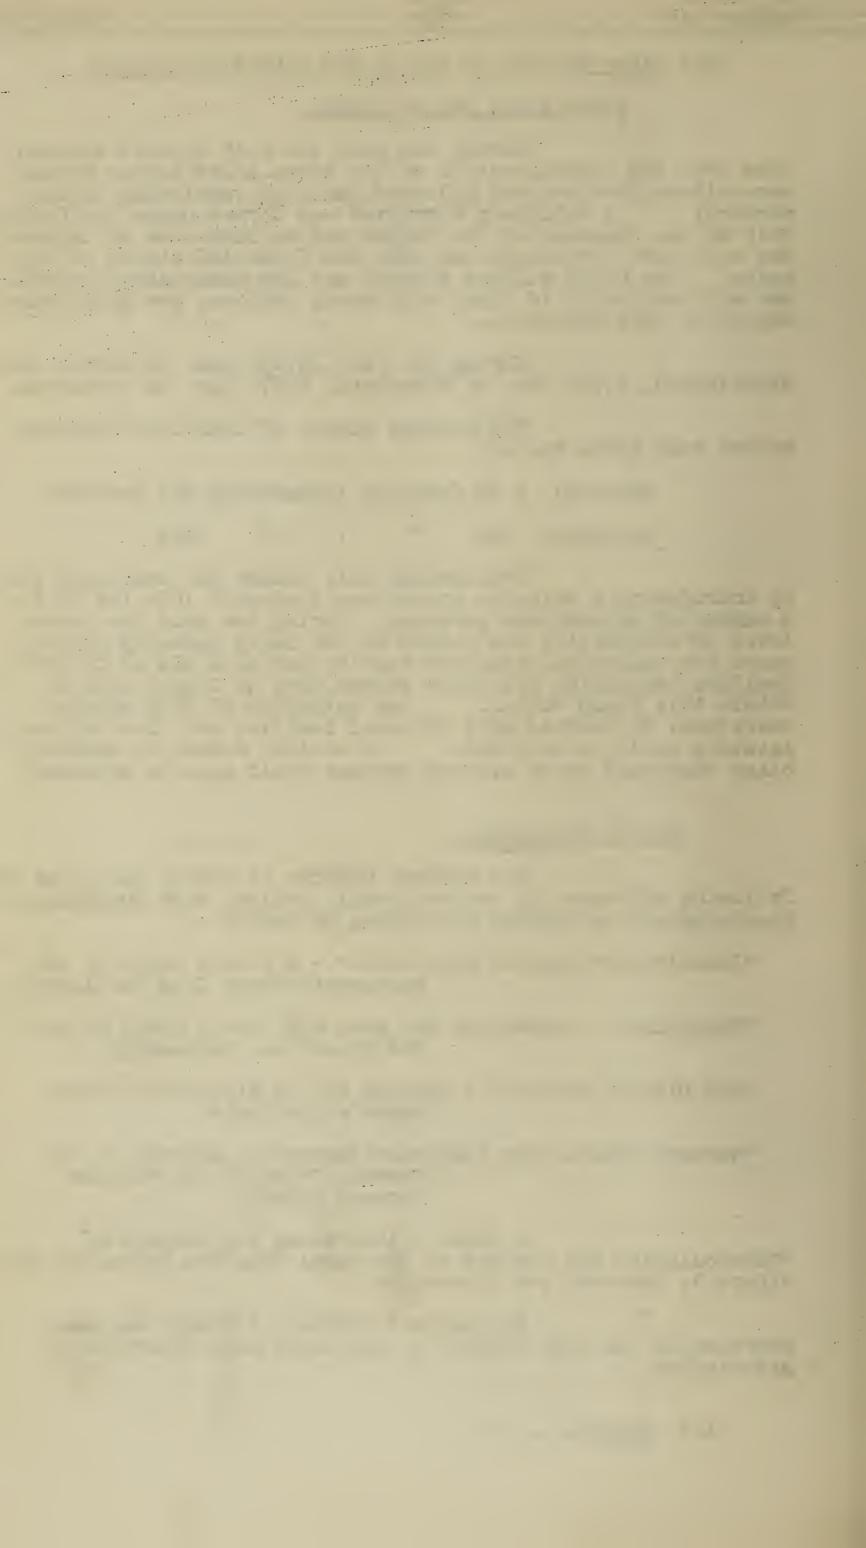

"The Disease Carrier" - Address to the Pietermaritzburg
Women's Institute.

"Nursery Schools for Pietermaritzburg?" - Address to the Parents Group of the Wykeham Nursery School.

A stall illustrating the subject of "Tuberculosis" was erected at the Royal Show and attracted considerable interest and discussion.

The Medical Officer of Health has also represented the City Council on the Natal Anti-Tuberculosis Association.

(16) PERI-URBAN AREAS./

er viller

.....

and the second of the second o

1 ... -.

(16) PERI URBAN AREAS.

Attention has been repeatedly drawn in previous reports to the menace that exists to the health of Pietermaritzburg from areas bordering Pietermaritzburg which are under no sanitary control at all. Edendale, Plessislaer, Raisethorpe, have steadily increased in size and the menace is becoming proportionately greater.

The population of the Edendale-Plessislaer district is now reckoned to be about 10,000, almost one quarter of the total population of Pietermaritzburg.

The Governmental Commission of Enquiry sat during the year to enquire into the position as it concerns Pietermaritzburg, and evidence was placed before the Commission pointing out the complete absence of sanitation, the lack of a pure water supply, and the non-existence of public health control in these areas, and showing the danger that existed to the public health of Pietermaritzburg through the growth of this uncontrolled area. It was suggested to the Commission that the most practical method of control at this stage was for the Local Authority of Pietermaritzburg to be granted power to control these areas through its Health Department, the actual expenditure involved in this control to be refunded to the City Council by the responsible authority.

Powers under the Slums Act have not been used during the year but powers under the Borough By-Laws have been exercised in a restrained manner. 21 insanitary dwellings have been dealt with in this way. Of these 16 were condemned and demolished under Public Health By-Law 19(b) and 5 were declared unfit for habitation under Public Health By-Law 19(a) and were vacated. In several cases action was only taken after the dwellings had become vacant. 7 dwellings have been voluntarily demolished, in nearly all cases following representations by this Department.

Plans.

All plans of new buildings are submitted to this Department, and 290 (including plans for 293 dwelling houses) have been scrutinized (Several plans were type plans). Of these 260 were approved, 22 referred back for alterations and subsequently approved, and 8 disapproved.

The City Engineer reports that during the year 83 dwellings were erected for Europeans and 5 for non-Europeans

((2) HOUSING OF NATIVES, NATIVE OR ASIATIC LOCATIONS OR BARRACKS.

The Corporation has a Native Village situated just off the Bishopstowe Road and about 3 miles from the centre of the town. This village comprises 254 houses and various public buildings and has a population of about 1,200. It is situated on a good slope, the houses are well constructed of brick, and the general layout is good. Water is supplied by communal standpipes.../

(2) Housing of Natives, Native or Asiatic Locations or Barracks. Contid.

standpipes from the Corporation water supply and sanitation is by the pail system. During the year work was commenced on the erection of a further 100 Subeconomic houses at the Native Village together with the construction of a Communal Hall in which is included an Infant Clinic. These 100 houses will be a substantial contribution towards the solution of the problem of rehousing of the Native population at present living under insanitary conditions. As these houses become available condemnation notices are served in respect of the slum dwellings at present occupied. In this way no hardship is caused for no dwelling is condemned until alternative housing is available for the occupants of the slum. This procedure which is conducted in close co-operation with the Municipal Native Administration Department is working satisfactorily and smoothly.

There are three Corporation hostels for single Natives. For males there is the East Street Hostel with a capacity of 239 and the new Ortman Road hostel with a capacity of 105. The Women's Hostel in Church Street provides accommodation for 160 single women.

The East Street Hostel and the Women's Hostel are sewered but the Ortman Road Hostel is outside the sewered area and is served by a pail removal system.

The Village and Hostels are all under the control of the Municipal Native Administration Department and 3 European Superintendents are employed.

The Natives (Urban Areas) Act is administered by the Manager of the Native Administration Department. 352 temporary licences have been granted to house unexempted Natives under this Act, pending the provision of more accommodation at the Village and Hostels.

About two-thirds of the Natives resident in the town are domestic servants, living in quarters provided on the property of their employers. These quarters are the subject of routine inspections by this Department and in general are satisfactory. Active steps have been taken during the year in regard to unsatisfactory domestic Native quarters, demolition orders having been issued in respect of 17 such premises.

The only special Indian housing is the two compounds belonging to the Corporation and housing the sewage farm workers and the scavenging gangs. These compounds are well constructed in brick and house respectively 32 and 27 Indian labourers together with their wives and families.

The construction of 50 Subeconomic Indian Houses has just been commenced and these should be ready for occupation by the beginning of 1940. A glance at the table on page 26 however will show how very much more will have to be done to overtake the housing problem of the Asiatic. The increasing cost of buildings may however jeopardise the success of these rehousing schemes. Even with the assistance of 3% Subeconomic Loans and even though costs are kept as low as possible, it is becoming very difficult to build Subeconomic houses to be let at a rental commensurate with the means of the slum dwellers it is intended to rehouse. The tentative rentals worked out for..../

And the second of the second o

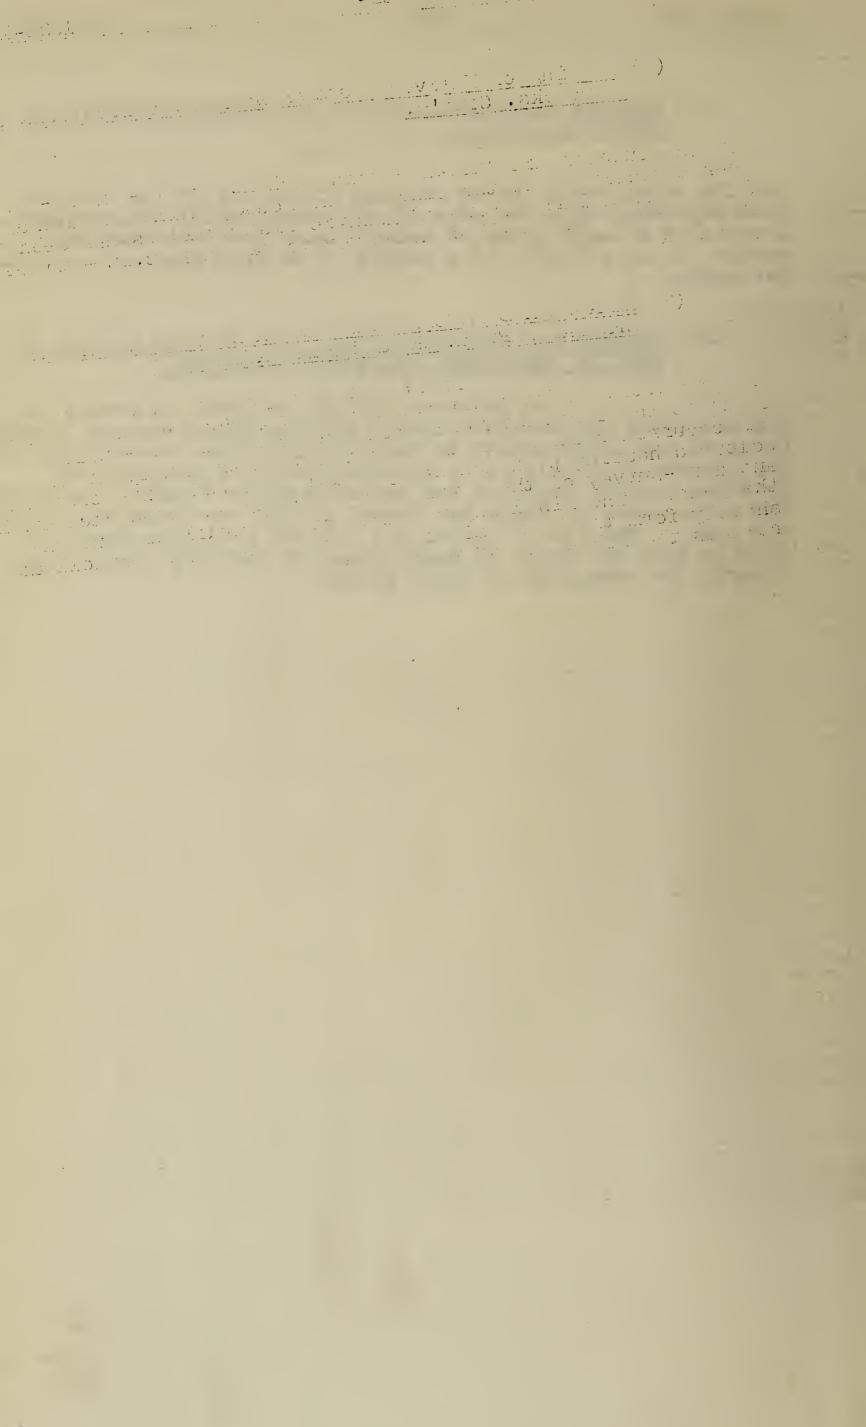

(2) Housing of Natives, Native or Asiatic Locations or Barracks. Cont'd.

for the Subeconomic Indian Housing Scheme are 7/- to 9/- per week depending upon the size of the house, while the average incomes of a large group of Asiatic slum dwellers has been worked out as a result of a survey to be from £2.12/- to £4.4.0. per month.

(3) REMARKS AND RECOMMENDATIONS, AND HOUSING MATTERS OF SPECIAL IMPORTANCE REQUIRING ATTENTION.

No definite further progress in regard to the projected Railway Subeconomic Housing Scheme can be recorded. Owing to the large amount of reconstruction and re-building that has occurred recently it is believed that the European and Coloured housing position has probably altered quite considerably and a re-survey of these two racial groups was conducted during the year. The final figures are not yet available but will shortly form the basis of suggestions to the City Council as regards the rehousing of these groups.
